Treatment Definitions:

Slurry Seal: a mixture of asphaltic emulsion and sand sized aggregate applied to the existing road.

Cape Seal: an application of asphaltic emulsion (road oil), immediately followed by an application of small rocks called chips to the roadway surface – followed by a slurry seal (a mixture of asphaltic emulsion and sand sized aggregate) approximately one week later.

Resurface: an application of a thin layer of asphalt concrete to the existing road.

Note:

Treatment types for various roads may be changed during the design phase to address topography and/or traffic issues.
